Support Material Removal

Support Material Removal

Bel Air MB-300 3D Support Cleaner is specifically formulated for removing Stratasys SR series support material (SR-10, SR-30, SR-100 etc.). It is recommended for use in all support removal equipment. MB-300 will remove SR-30 soluble supports up to 4 times faster than the leading competitive cleaner.

Bel Air MB-301 Eco-Reclaim Agent is a unique product specifically designed to remove support material from a spent MB-300 3D Support Cleaner solution in those instances where removal of such material is desired. MB-301 Eco-Reclaim Agent is simple to use. Each unit contains sufficient material to treat 10 gallons of spent MB-300 3D Support Cleaner. The MB-300 3D Support Cleaner solution is ready to be treated when the color changes from blue to white.

■ *Just pour MB-300 concentrate into water, heat the solution, and insert your parts into the machine. Support material will dissolve faster in MB-300 than in competitors' support cleaner!*

■ *MB-301 Eco-Reclaim Agent reclaims almost all support material, leaving a liquid with a pH of 9, legally safe to dispose of through drains*

Product	Solid/Liquid
MB-300 3D Support Cleaner Concentrate	Liquid

Example Measurements

Support Removal Mixing Ratio	% by Volume	Quarts	Liters
MB-300 3D Support Cleaner Concentrate	2.5% v/v	1 quart	25 mL
Water	97.5% v/v	39 quarts	975 mL

Eco-Reclaim Agent	Mixing Ratio of Powder to Spent Solution
MB-301 ECO Reclaim Agent	6.25 kg per 10 gal

■ *For use with Bel Air's Ultrasonic Consoles*
